RE: PWS Project – Lake Tapps - Opposed

I, the undersigned am opposed to the use of Lake Tapps as a source of drinking water for the Eastside. This recreational lake is surrounded by over 2,000 homes, many on septic systems. State of the Art filtration cannot adequately remove excreted pharmaceutical drugs such as prosac, Viagra, birth control, clofibric acid, beta-blockers, antibiotics, analgesics and antiseptics. The existing clean water supplies from the Cedar and Tolt rivers are still available and affordable. This proposed PWS will be detrimental to the public welfare and interest and should be rejected.

Thank you,

Carolyn Clark
